REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Loccufier et al (US 2003/0091932 A1) teaches present heat-sensitive lithographic printing plate precursor of claim 1 except for the present infrared light absorbing dye comprising at least one polysiloxane group.

Loccufier et al teaches ([0069]) the following compound as their IR absorbing dye compound

, and the compound shown above does not contain any polysiloxane group in its structure. Also, Loccufier does not fairly suggest that his IR absorbing compound can include a polysiloxane group in its structure.

Iwanaga et al (JP 09-087630 and its DERWENT English abstract and machine-assisted English translation provided by Japan Patent Office) teaches a dichroic dye compound (which can be coumarine, merocyanine or perylene) bearing a siloxane bond in the basic backbone and/or the substituent. Iwanaga teaches that the dye has high solubility in liquid crystals and can narrow the half width in the absorption spectrum of the resultant liquid crystal composition to improve color display performance without viscosity increase in the composition,

when added to liquid crystal. However, it is the Examiner's position that one skilled in the art would not have found any motivation to add Iwanaga's dye having the siloxane bond into Loccuifer's composition because Loccuifer's invention is drawn to a lithographic printing plate precursor whereas Iwanaga's dyes are said to be added to a liquid crystal.

Therefore, present invention of claim 1 which requires the presence of the IR dye comprising at least one polysiloxane group is distinguishable over Loccuifer or Iwanaga et al.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
